### Product description

## Deredeo Dreadnought: Anvilus Configuration

This multipart plastic kit builds a Deredeo Dreadnought in the Anvilus configuration. This intimidating combat engine can be assembled with either a fast-firing Anvilus autocannon battery or an armour-rending hellfire plasma cannonade for its primary, arm-mounted weapons, along with either twin-linked heavy bolters or twin-linked heavy flamers embedded in its torso. As if this wasn't enough firepower, this walking gun platform also has a powerful Aiolos missile launcher mounted on top of its hull.

The kit comes with multiple cosmetic build options, with different leg poses, knee pads, armour panels, carapace armour, and head options, allowing you to enjoy customising this miniature into the perfect fit for your Legiones Astartes force, whether you've thrown your lot in with the Loyalists or Traitors.

This multipart plastic kit comprises 166 plastic components, and comes with a Citadel 80mm Round Base and a Legiones Astartes Vehicle Transfer Sheet, containing 44 optional markings and icons for the Sons of Horus and Imperial Fists Legions. This miniature is supplied unpainted and requires assembly - we recommend using Citadel Plastic Glue and Citadel Colour paints.
