Manufacturer	Games Workshop

Product description

Space Marines: Primaris Redemptor Dreadnought

This multi-part plastic kit contains the components necessary to assemble a Primaris Redemptor Dreadnought. Standing twice the height of the already-tall Primaris Space Marines – and taller and broader than the standard Dreadnought – this is an exceptionally aggressive-looking model that befits its status as a powerhouse on the gaming table. It comes with a choice of gatling cannon or plasma incinerator on the right arm, with a Redemptor fist and heavy flamer support weapon or gatling cannon on the left, 2 chest-mounted fragstorm grenade launchers or storm bolters and a carapace-mounted Icarus rocket pod for aerial denial.

The heavy armour on the chest – replete with flat surfaces and sharp lines, perfect for adding transfers and detail – of the Redemptor Dreadnought can be modelled to pivot open, showing the sarcophagus interred within. The adventurous hobbyist can remove the pegs from the waist, arms and legs of the model too, allowing for a greater range of posing options.

The Primaris Redemptor Dreadnought comes as 109 components, and is supplied with a Citadel 90mm Round base and a transfer sheet.
